Who is on TikTok?

Cumulative volume of mentions of physician specialties on TikTok

Note: Illustrative. All counts as on May 6, 2023. All counts cumulative.

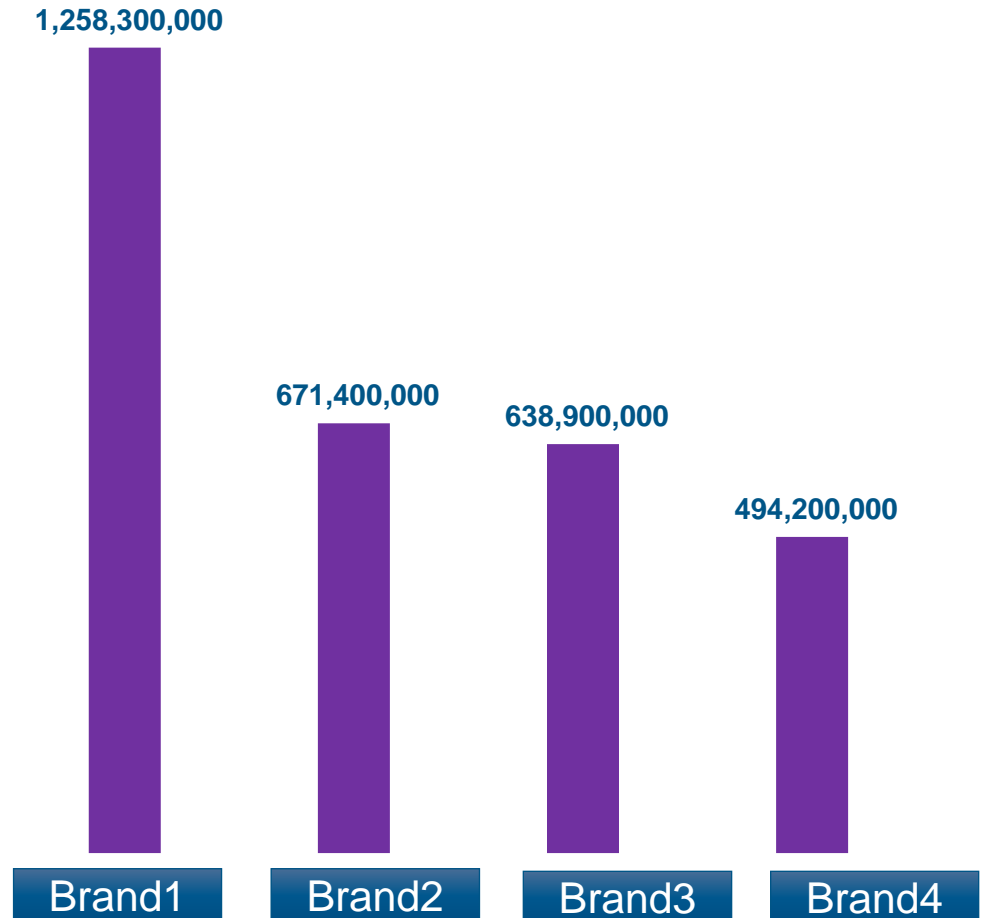

Diabetes/weight-loss brands on TikTok

Brand mentions of TikTok

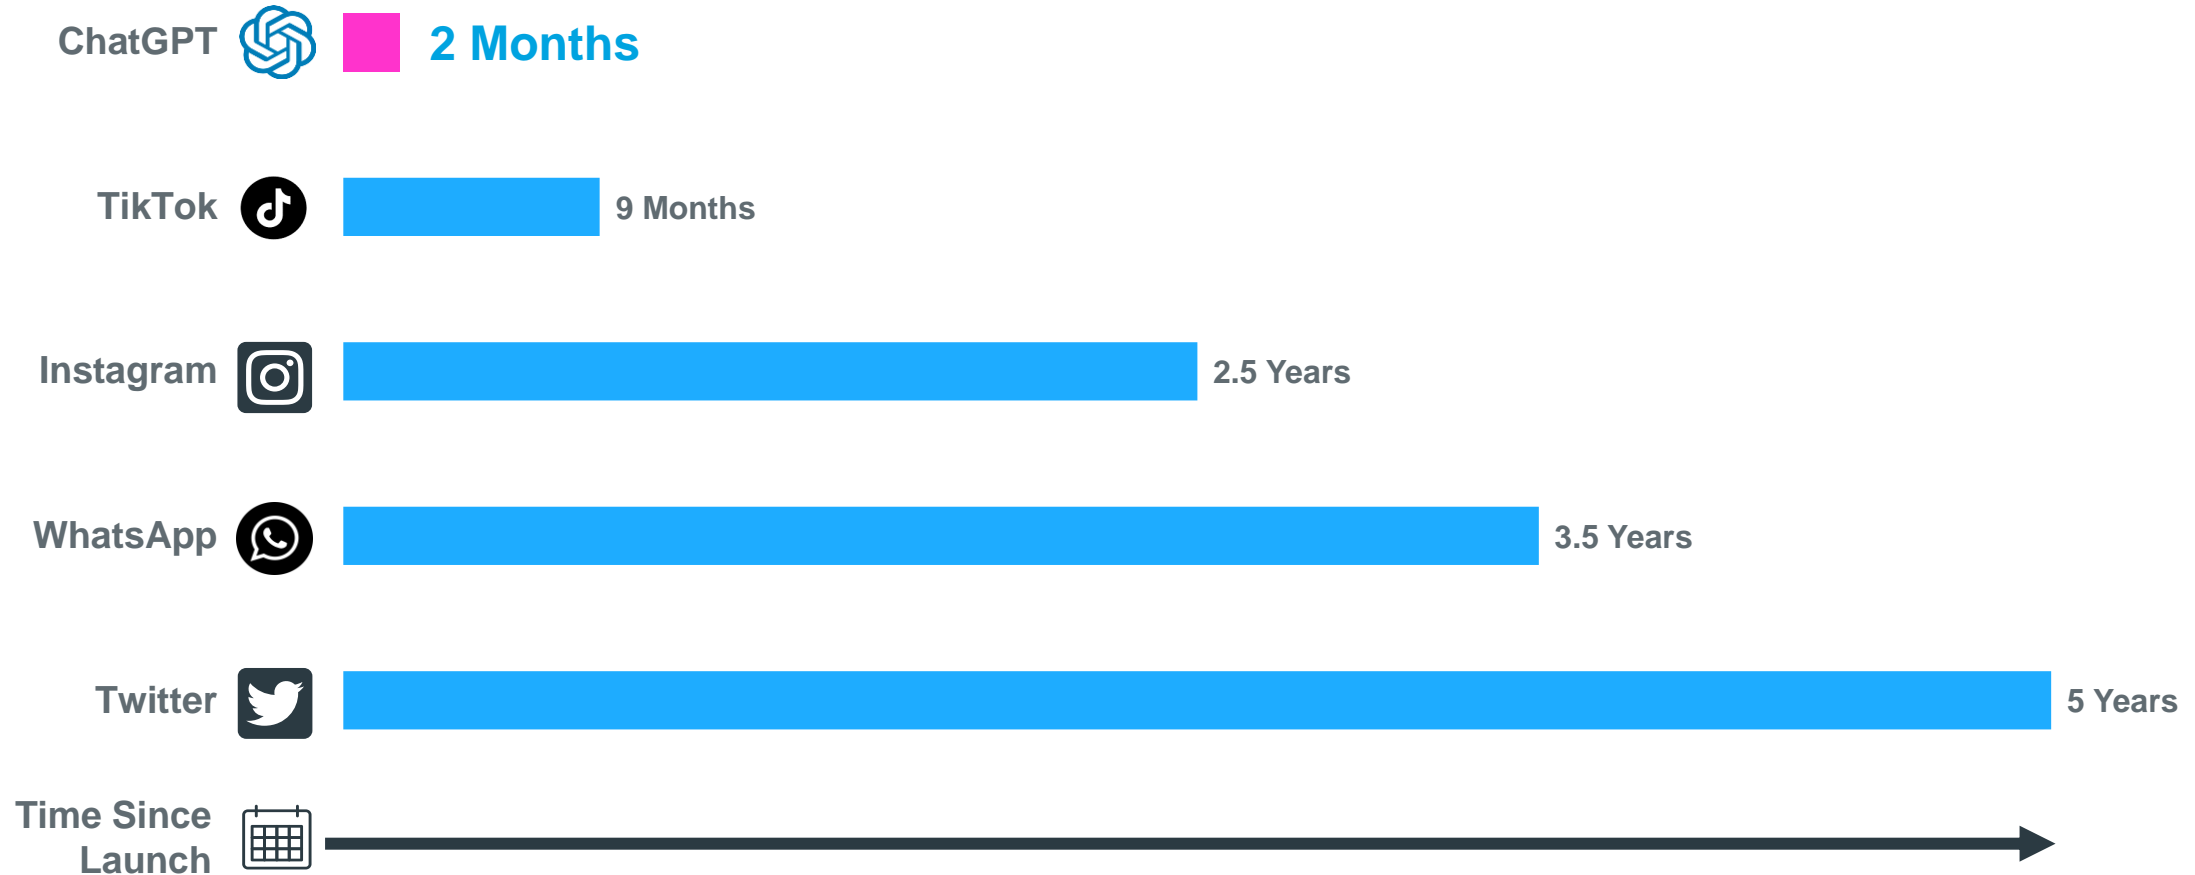

Video views of brands on TikTok

Note: Illustrative. All counts as on May 6, 2023. Video views for top hashtags associated with the brand. All counts cumulative.

Guess what beat TikTok in speed of adoption?

Time Taken to Reach 100 Million Users from Launch

Social listening challenges

Solution

Social listening challenges for life sciences companies

Challenge 1: Big Data

Social mentions of top 40 products across categories for a life sciences company can amount to a few million

Challenge 2: Diverse Data

Social media data is complex, unstructured and comes in various formats

Challenge 3: Siloed Data

Digital data beyond social media such as Google search queries, content virality, product reviews, web/ campaign analytics

Challenge 4: Decentralized Operations

Driven by diverse business priorities, social listening is often conducted on a need basis locally

Challenge 5: Non-Compliant Data

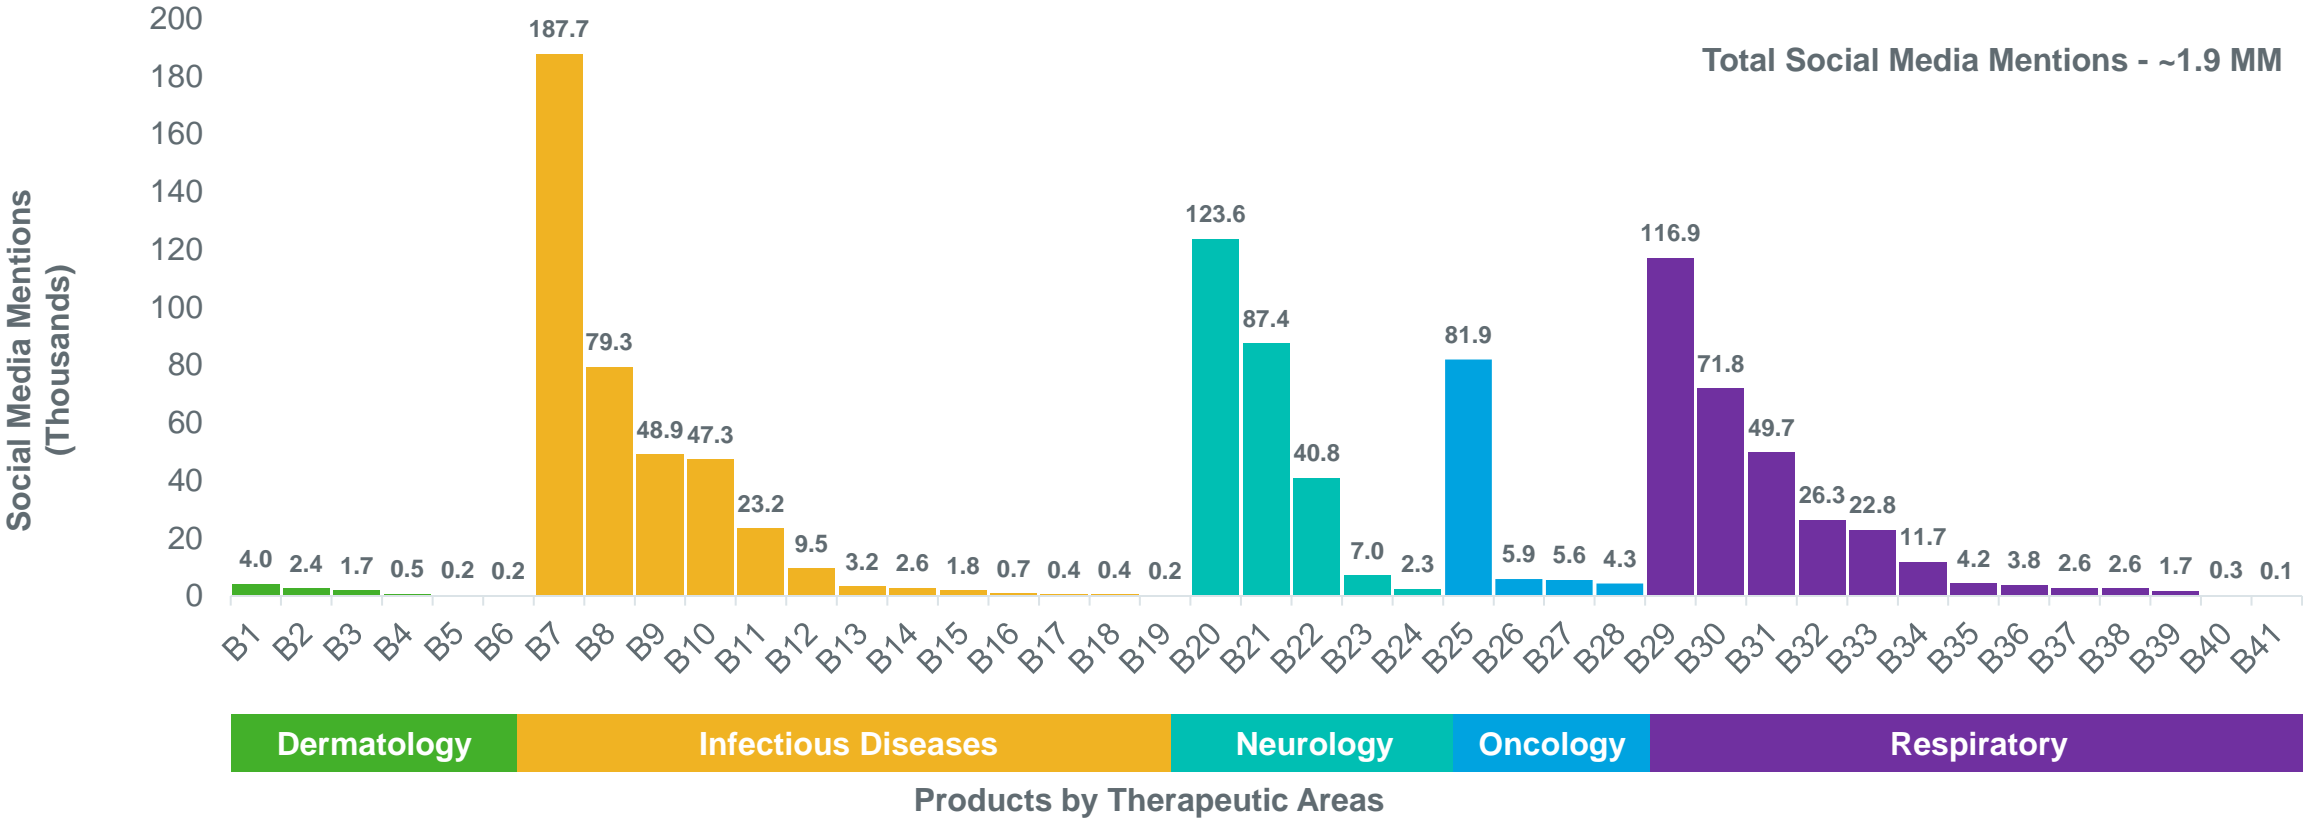

Ensuring regulatory compliance by timely reporting of adverse events discussed by patients on social media

Challenge 1: Big Data

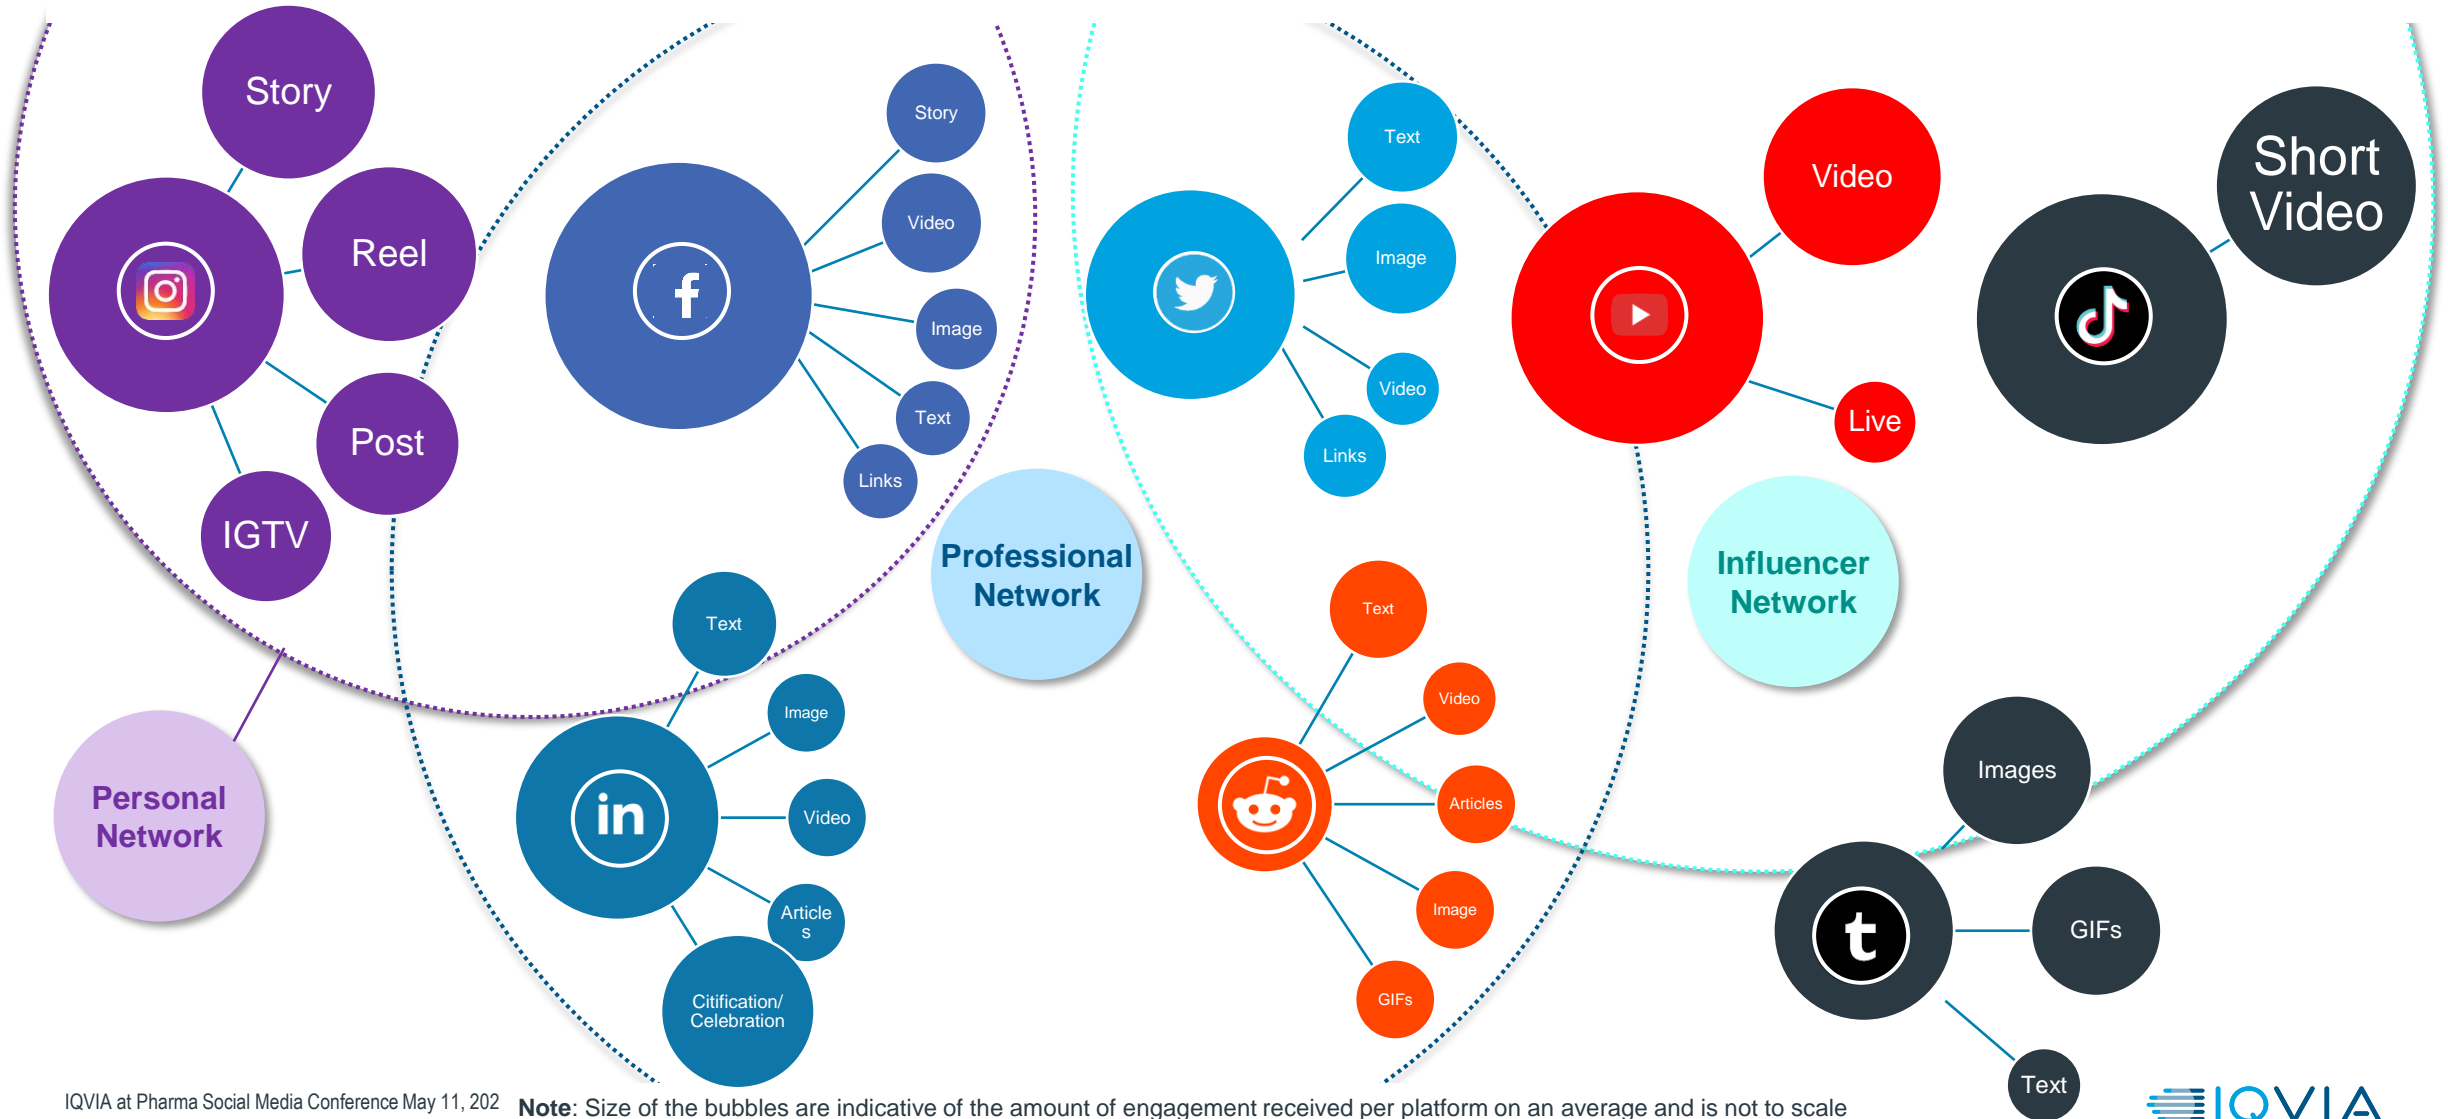

~1.9MM social media mentions for the top 40 brands of a large pharma company across therapeutic areas

Social Conversation Volume from Mar 2022 to Feb 2023 for In-Market Products of a Large Pharma Company across Therapeutic Areas

Challenge 2: Diverse Data

Content complexity is ever increasing, for e.g., Twitter went from 120 characters to 280 and soon ~10,000

Challenge 2: Diverse Data

Analyzing non-textual content such as emojis, images and videos is a challenge

Emoji Cloud for Social Media Posts Mentioning Brand1 (April 2022 – March 2023)

Challenge 3: Siloed Data – Is only social media data sufficient?

Not everyone posts online. While web analytics and search analytics help you understand customer behavior holistically, there is no do-it-all tool. You need to master a combination of tools to uncover insights

Challenge 4: Decentralized Operations

Social listening is good to have, ad-hoc, experimental, tool driven, region/franchise driven

80% of life-sciences companies approach social listening in the following ways

Consequences of the current approach

Ad-hoc

- Need based/reactive projects
- Not a part of annual brand planning
- Triggered by events – launch/ conference/ risk to reputation

Decentralized

- Franchise driven and un-consolidated
- Multilingual needs
- Subject to local regulations and compliance
- Local procurement resulting in multiple tools/vendors

Irregular

- Experimental process and a new dimension of insights
- Varying objectives and expectations
- Limited budget/reallocated market research budget

- **Suboptimal use of budget**
- **Limited knowledge sharing**
- **Underserved value**
- **Over-reliant on tools**
- **Disconnected use cases**
- **Challenging to prove ROI**

Full-potential unrealized

Challenge 5: Non-compliant Data

“I take this drug twice everyday since last month and my sweat smells like cat pee.”

Social listening challenges

Solution

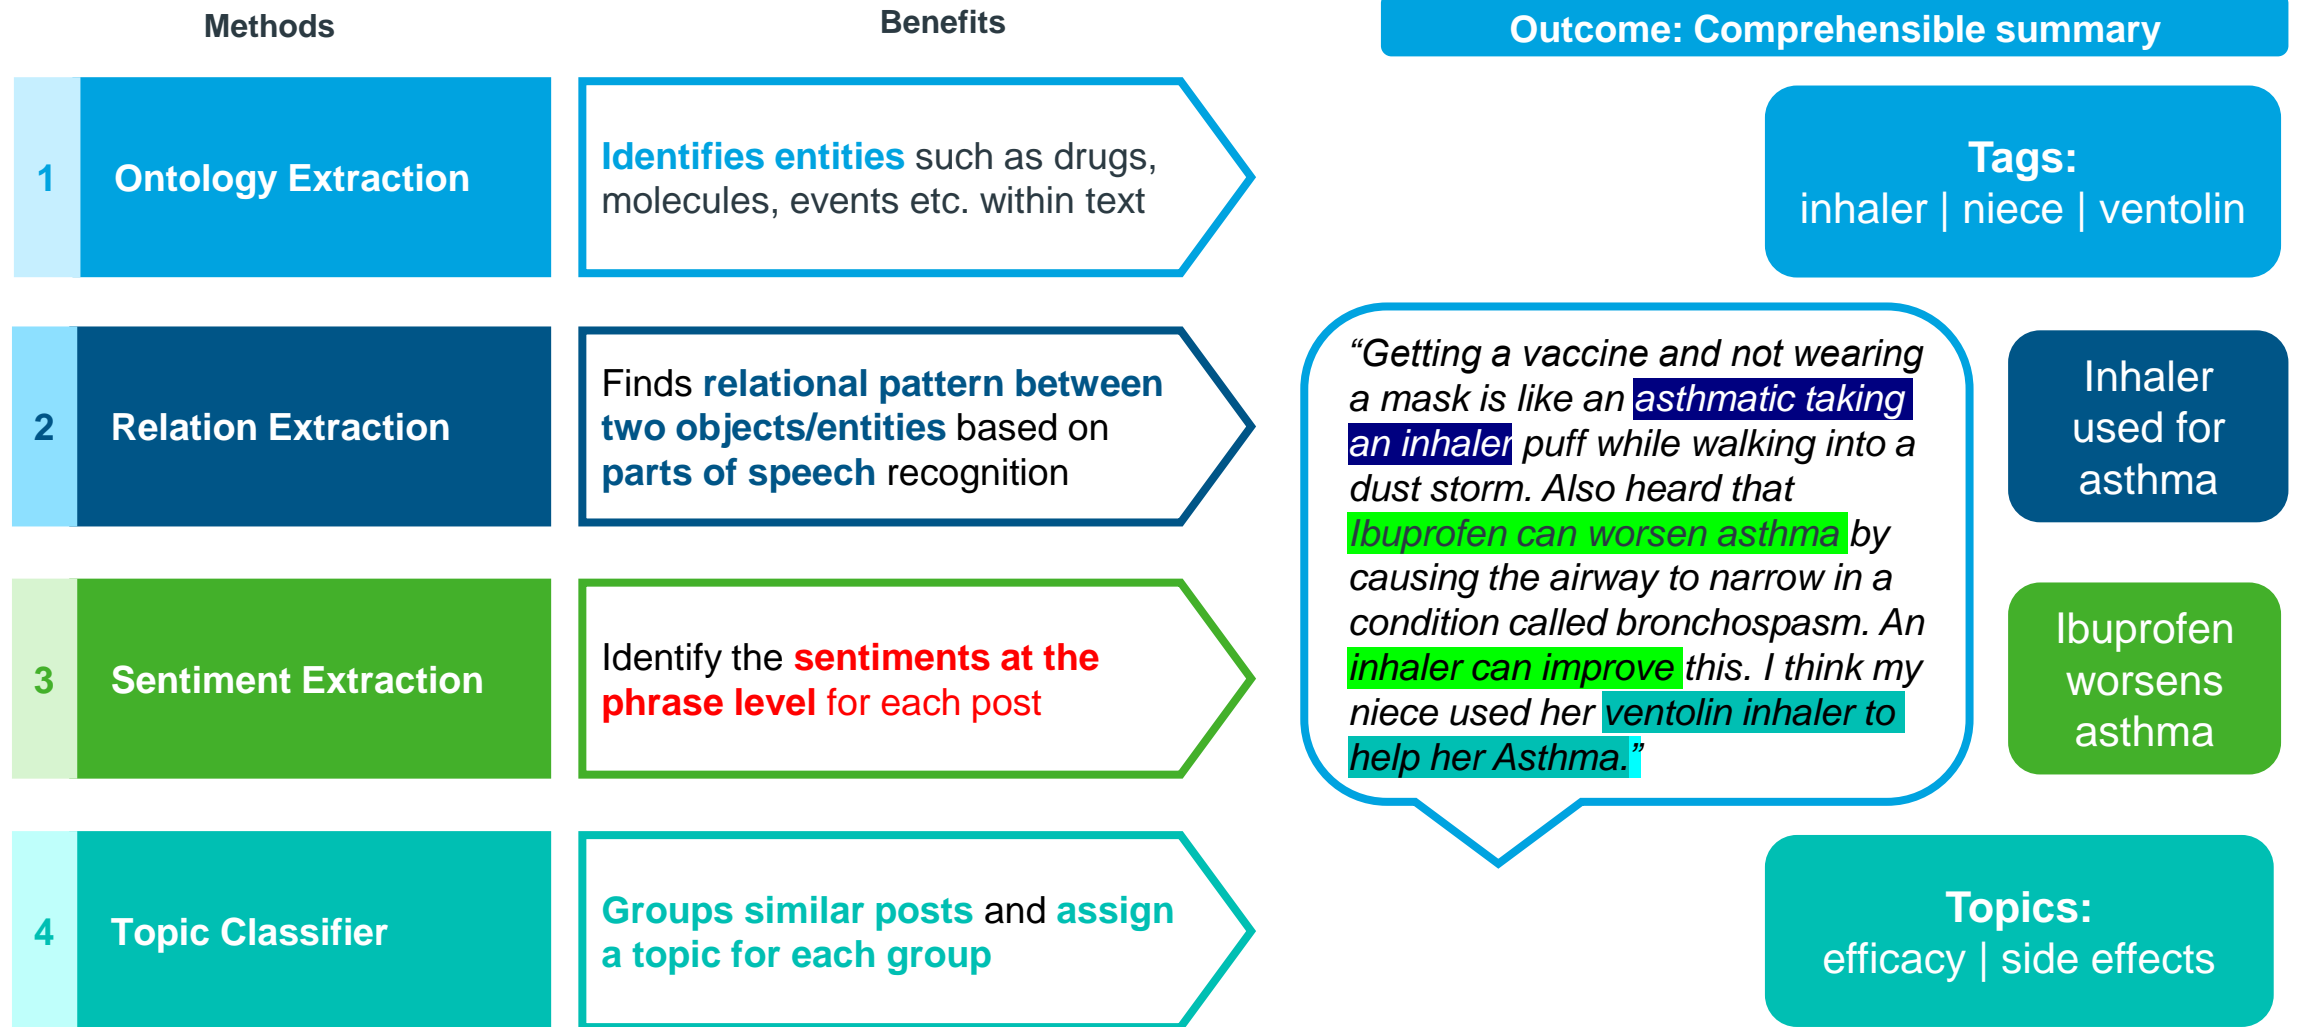

What's the solution?

Enterprise-wide social listening using advanced NLP

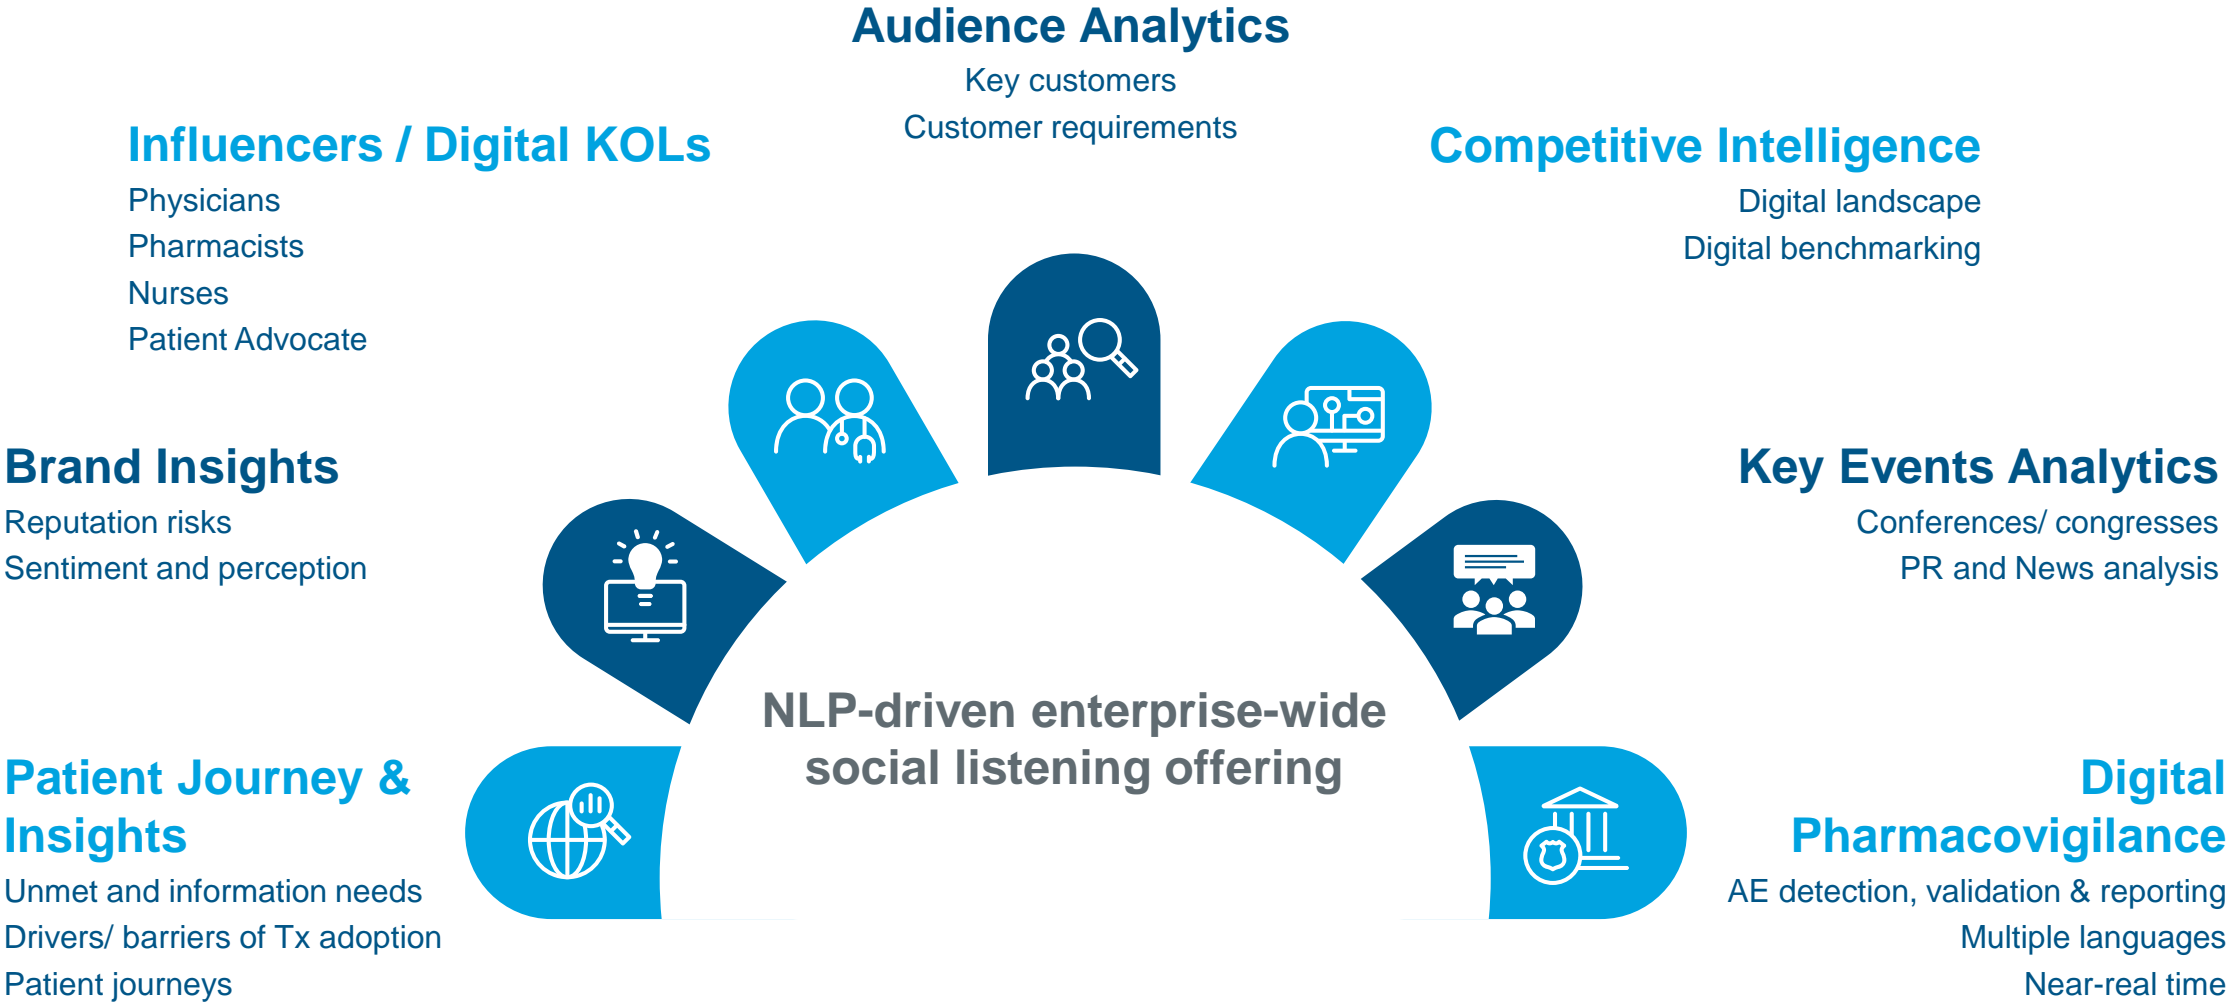

| Solution | Consequence | Benefits |
|---|--|---|
| 1 Enterprise-wide social listening | Value from social media insights is available across geographies, audiences, and brands |  Saves Cost  Saves Time  Improves Actionability |
| 2 Advanced-NLP | Enables insight generation by processing vast amounts of unstructured, unformatted data | |
| 3 Unified presentation layer | Gives a comprehensive perspective on brand health through familiar business intelligence formats | |
| 4 Connected digital intelligence | Adds scalability to monitoring and promotes easy access to insights beyond social intelligence | |
| 5 Centralized operation | Cost synergies and consolidation of actionability and data access | |
| 6 Digital Pharmacovigilance | Ensures regulatory compliance and data governance | |

What do we achieve using Natural language Processing?

Here are 4 NLP methodologies that can be used to summarize the voluminous social data

Enterprise-wide social listening using advanced NLP technology, human intelligence, and deep healthcare expertise enables 7 key capabilities
